Instructions:

Sign in using my test credentials to view already existed sms
Username: jai
Password: Jai*1234

You can use signup page to signup to the app

Make sure you have two mobiles to test the app or emulators would be fine and login using same credentials to view the sms because it is user specific, who sends the messages can see the messages.

When you select sender in one instance of app and receiver in another instance of app. The sender will read all the sms it receive and send it to aws.

Receive atleast one message using the sender app to view the messages in the message activity

When you reload in the receiver all the sms from the aws are retrieved and displayed it in the activity UI.
